PROJECTS

Job Platform | *GitHub Repository* [↗](#)
Technologies Used: HTML5, Tailwind CSS, ReactJs, Redux , RTK Query , JSON Server
Developed a comprehensive job posting platform for job seekers and recruiters, aimed at streamlining the job search andapplication process.
Enabled users to browse job listings, apply for jobs, and track their application status.
Allowed recruiters to post job listings, manage applicants, and view candidate profiles.

Quiz Application | *GitHub Repository* [↗](#) *Application demo* [↗](#)
Technologies Used: HTML5, CSS3, ReactJs, Firebase
Developed a web-based platform enhances the efficiency of course management and assessment by providing a seamless, role- based platform for both admins and students to interact, manage, and track academic performance in real-time with distinct roles for admin and students.

Smart Agricultural System | *GitHub Repository* [↗](#)
Technologies Used: HTML5, CSS3, Python, Flask,Machine Learning Algorithms
Developed a web-based application that predicts the most suitable crops to plant based on user inputs such as soil conditions, rainfall levels, and location and implemented machine learning algorithms to model the existing dataset and generate accurate crop recommendations.

COCURRICULAR ACTIVITIES

Industrial Visit Coordinator of CSE Department.
Actively participated in National Level Technical Symposium conducted in other colleges.
